

850 MILLION
PEOPLE
WORLDWIDE

are now estimated to have some form of kidney disease.

Advancing Worldwide Kidney Health

11th LEADING CAUSE OF GLOBAL MORTALITY

Chronic kidney disease (CKD) causes an estimated 1.2 million deaths per year and is now the 6th fastest growing cause of death. An additional 1.2 million deaths are attributable to reduced kidney function (measured by the glomerular filtration rate (eGFR)).

13 MILLION
PEOPLE AFFECTED
WORLDWIDE

Acute kidney injury (AKI), an important driver of CKD, affects over 13 million people worldwide and 85% of these cases are found in low and middle-income countries (LMICs).

Advancing Worldwide Kidney Health

2·6 MILLION RECEIVED DIALYSIS OR TRANSPLANTATION **WORLDWIDE**

In 2010, 2.6 million people with end-stage kidney disease (ESKD) or “kidney failure” received dialysis or transplantation worldwide. A number projected to increase to 5.4 million by 2030.

Advancing Worldwide Kidney Health

\$35,000 - \$100,000

DIALYSIS AND KIDNEY TRANSPLANTATION ANNUAL COSTS

The cost of treating CKD and its complications is unaffordable for governments and individuals in many parts of the world. Annual costs of dialysis and kidney transplantation alone range between US \$35,000 and US \$100,000 per patient.

BETWEEN
2.3 - 7.1 MILLION
PREMATURE DEATHS FOR
**LACK OF ACCESS TO DIALYSIS AND
TRANSPLANTATION**

The majority of these deaths occur in countries where resources are insufficient and out of pocket costs are too high.
