Advancing Nephrology Around the World
About ISN

The International Society of Nephrology (ISN) is a global not-for-profit membership-based society dedicated to improving kidney care and reducing the incidence and impact of kidney disease worldwide. Through its global network and programs, ISN brings together the developing and developed worlds in a collaborative effort in fighting and treating kidney disease on a global scale.

With 9,000 professional members from 129 countries, ISN represents a wide international network. It provides an efficient platform for timely scientific exchange, debate and communication between all healthcare professionals involved in preventing and treating kidney disease. By collaborating with almost 90 national and regional societies, ISN represents an additional 20,000 professionals around the globe.

Since 1960, the ISN has been providing nephrologists worldwide with highly valuable services, such as publications, meetings, capacity-building programs, and has been spearheading concerted awareness-generating efforts such as World Kidney Day.

ISN Vision, Mission and Values

| Vision |
| ISN aspires towards the elimination of kidney disease worldwide. |

| Mission |
| ISN is dedicated to advancing the diagnosis, treatment, and prevention of kidney diseases globally through collaborations, meetings, publications, outreach, and other activities that: |
| • Raise public awareness of the importance of early recognition and treatment of kidney diseases |
| • Connect professionals interested in kidney and related diseases around the world |
| • Support research to achieve optimal care of people with kidney diseases |
| • Provide nephrology education and training worldwide; and ultimately |
| • Reduce the frequency and impact of kidney diseases and their associated conditions |

| Values |
| The International Society of Nephrology: |
| • Values new knowledge and is committed to excellence in research, education, and patient care globally |
| • Will always act in a way that is politically neutral, humanitarian, and culturally diverse |
| • Values collegiality and interaction and is committed to diversity in membership, governance, committee structure, and programmatic activities |
| • Is committed to the scientific basis of nephrology and to advancing knowledge across all geographic, national, racial, religious and economic conditions |

ISN reaches nearly 30,000 nephrology-related professionals through its partnerships with its affiliated societies.
Publications

Kidney International (KI)

Kidney International (KI), ISN’s official journal, is one of the most cited in nephrology and widely regarded as the world’s premier journal on the development and consequences of kidney disease. KI is peer-reviewed and publishes original research in both basic science and clinical medicine. It aims to inform the renal researcher and the practicing nephrologist on all aspects of renal research. Kidney International Supplements, focuses on topical content of interest to the nephrology community and Kidney International Reports is an online, open access publication devoted to leading research and developments related to kidney disease.

www.theisn.org/ki

ISN Education

ISN Education is a comprehensive collection of educational resources with a database of articles, case studies, guidelines, presentations, and images. It also includes special resources like Ask the Experts and Global Outreach Postings. ISN Education integrates ISN’s educational activities, making training more accessible to nephrologists in developed and developing countries.

www.theisn.org/education

Scientific Support

ISN provides both financial support and guidance through its many committees, including:

- **Acute Kidney Injury Committee** develops uniform standards for defining and classifying Acute Kidney Injury (AKI) that can be used in clinical research (trials) in patients with AKI and provides consensus standards for diagnosing and classifying (staging) AKI.
- **Dialysis Committee** develops treatment programs for AKI in the emerging world including training of individuals in dialysis.
- **Interventional Nephrology Committee** provides topical information and the best educational tools for the professional and successful performance of all aspects of interventional nephrology.
- **Renal Pathology Committee** participates in and facilitates CME activities, organizes courses and master classes, and awards grants to centers of pathological excellence.
- **Renal Disaster Relief Task Force (RDRTF)** provides essential renal aid to people in the wake of natural disasters.
Meetings

| World Congress of Nephrology |
WCN is the leading biennial educational event in international nephrology, attracting attendance from the worldwide nephrology community as well as other healthcare professionals involved in multidisciplinary nephrology care. It not only features a world-class scientific program but also reflects the unique role of ISN’s efforts in advancing renal care in the developing and developed world. 

www.wcn2017.org

| ISN Forefronts Symposia |
ISN Forefronts Symposia focus on emerging and groundbreaking research. They gather nephrologists and active investigators from surrounding medical areas to explore new scientific domains and review the latest developments in kidney disease.

www.isnforefronts.org

| ISN Nexus Symposia |
ISN Nexus Symposia bridge the gap between basic research and clinical practice and offer a profound focus on translational medicine and clinical application. The Nexus symposia aim to address the increasingly multidisciplinary approach to kidney health issues.

www.isnnexus.org
ISN Programs

The ISN works to alleviate the growing socio-economic burden of kidney disease through a portfolio of global initiatives to enhance nephrology through education and research. These global initiatives are organized and managed through the ISN Programs, which identify the educational and clinical needs in emerging countries and offer valuable training and educational activities for kidney specialists of all levels.

Sister Renal Centers Program (SRC)

The Sister Renal Centers Program (SRC) links renal centers in emerging countries with supporting centers of excellence in the developed world. With this educational support and guidance, self-sufficient renal centers are created in emerging countries.

Each year, the SRC Program provides funding and education to 50 sister-center pairs.

Application Deadline: October 1

www.theisn.org/src

Fellowship Program

The Fellowship Program helps educate physicians coming from emerging economies, giving them hands-on training opportunities unavailable in their home nations. Fellows are sponsored for a period of 3 to 12 months to train in a developed renal center, after which they return to their home country to implement their knowledge and improve standards of care there.

Since the beginning of the Program, over 700 ISN-trained nephrologists from emerging countries have taken on leading healthcare positions in their regions.

Application Deadline: May 1 and October 1

www.theisn.org/fellowship

CME Program

The Continuing Medical Education Program (CME) brings essential teaching and training to some 14,000 doctors in over 40 settings every year. CME meetings take place in the developing world, where expert speakers from the developing and the developed world share their knowledge and experience in clinical care and research.

Each year, some 50 CME courses take place in over 30 countries, providing high-quality updates and clinical knowledge to 14,000 renal healthcare providers.

Applications: Throughout the year

www.theisn.org/cme

Educational Ambassadors Program

The Educational Ambassadors Program sends experts to developing renal centers for one to four weeks to provide hands-on training or help develop new services, community-based research or screening programs.

Since the launch of the program in 2010, over 100 Educational Ambassadors have been mobilized.

Application Deadline: May 1 and October 1

www.theisn.org/eap

Clinical Research Program

The Clinical Research Program aims in part to educate people in emerging countries about the importance of having healthy kidneys. Many of the projects funded through the program set up screening and education to raise awareness and improve the understanding of kidney disease.

Over 70 research, prevention and screening programs in 19 emerging countries have been implemented.

Application Deadline: May 1 and October 1

0by25

0by25 is an ISN human rights initiative which calls for globally applicable strategies that permit timely diagnosis and treatment of Acute Kidney Injury (AKI) for patients with potentially reversible diseases. Its overarching goal is to achieve zero preventable deaths from AKI by 2025. This is a global initiative with a strong emphasis on middle and low income countries in Africa, Asia, and Latin America and their disadvantaged populations with poor access to care.

Evidence

0by25 aims to address the current information gap and to demonstrate the global burden of AKI by collecting new and existing data on the incidence, diagnosis, management and treatment of this disease.

WHAT WE DO

- ISN has produced a Global Snapshot of AKI, a global, cross-sectional study carried out simultaneously in hundreds of centers around the world in order to better understand the growing AKI burden. The results of this study are published in The Lancet.*

Awareness

0by25 aims to raise awareness of AKI through education and training across the global healthcare community, including among healthcare professionals, patients and, more widely, among governments and public health institutions and the private sector.

WHAT WE DO

- ISN is mapping and developing AKI education and awareness raising tools aimed at patients, healthcare professionals and governments, which can be adapted for use in every region in the world.

Action

0by25 aims to establish a sustainable infrastructure for prevention, education and training, detection and management of AKI, which can be implemented according to local needs and resources.

WHAT WE DO

- ISN is developing Pilot Projects to test six interventions under a common framework aimed at improving AKI detection and management in selected centers in Asia, Africa and South America.

*** According to the findings of the AKI Global Snapshot
Awareness

World Kidney Day

World Kidney Day (WKD), a joint initiative of the ISN and the International Federation of Kidney Foundations (IFKF) informs and educates health policy-makers, medical staff, and the general public worldwide about chronic kidney disease to drive the earliest possible diagnosis and optimal treatment.

The mission of WKD is to raise awareness of the importance of our kidneys to our overall health and to reduce the frequency and impact of kidney disease and its associated health problems worldwide.

Achievements: World Kidney Day has grown to become a worldwide success with local WKD activities taking place in more than 150 countries. It has achieved global media coverage, impressive prominence on social networks, and most importantly, catalyzed meetings between renal patients, medical professionals and government health authorities in many countries.

Scientific Editorial

The 2016 Scientific Editorial was published in 70 scientific journals.

Important Events

- Empire State Building in New York was lit up on March 10, 2016 to celebrate World Kidney Day.
- Christ the Redeemer in Rio de Janeiro was lit up for World Kidney Day.
- La Sagrada Familia in Barcelona was lit up in celebration of World Kidney Day.
- American rap musician Freeway publicly endorsed World Kidney Day and helped spread the message.

#MoveYourFeet4WKD

#MoveYourFeet4WKD was the 2016 campaign call-to-action, encouraging people to take a picture of their feet and sharing it on social media to help draw attention to the issue.

- 1,500 pictures shared
- 2,000,000 people reached
Collaborations

The Society’s vision of reducing the incidence and impact of kidney disease worldwide has led to strategic partnerships and collaborations. To establish a more effective network among renal organizations worldwide, ISN has intensified relationships with national and regional renal societies by creating formal affiliations. ISN now collaborates with 86 national and regional nephrology societies around the world, representing about 30,000 professionals. In addition, ISN collaborates with many organizations around the world.

In official relations with the World Health Organization (WHO) to influence global health policy and represent the diverse challenges of nephrology on the world stage.

Supporting the dissemination of Kidney Disease: Improvement of Global Outcomes (KDIGO) guidelines to improve the care and outcomes of kidney disease patients worldwide.

In partnership with the International Pediatric Nephrology Association (IPNA) to promote education in the developing countries.

Working with the Transplantation Society (TTS) in setting up the Istanbul Declaration on Organ Trafficking and Transplant Tourism enforcing standards and prohibiting unethical practices worldwide.

Collaborating with the International Society of Peritoneal Dialysis (ISPD) in proving better care opportunities for low-resource health settings to look after AKI patients.

Educational partnership with the American Society of Diagnostic and Interventional Nephrology (ASDIN) to promote and improve the understanding and management of clinical issues concerning dialysis access care.

The Lancet is collaborating with ISN in promoting the results of the 0by25 Global Snapshot. ISN and The Lancet also collaborate on The Lancet Kidney Campaign.

Corporate Members

The ISN Corporate Members Committee consists of high level representatives from prominent companies active in the field of nephrology. The objective of the Corporate Members Committee, as a consultative committee of the ISN, is to assist the Society in achieving its mission and in a wider sense to promote the knowledge and understanding of the role of the kidney in disease and health, as well as increase awareness about kidney disease and promote collaborations with other relevant specialties or stakeholders.
Make a difference - get involved

**Through Membership**

ISN members work in collaboration with other nephrologists and help advance kidney care around the world. In addition, members receive many valuable benefits that significantly help them personally and professionally. They experience and support the ISN activities that contribute to improving the conditions and outcomes of people living with kidney disease. They learn more about new and diverse cultures and healthcare systems, giving them a better understanding of worldwide nephrology issues. And, by taking part in capacity-building programs, ISN members develop and contribute to renal knowledge within local communities and enhance their scientific knowledge through the diverse ISN education activities. Being part of ISN is not just about what members receive as part of their membership but also what they give. Members’ involvement contributes to the Society’s philanthropic and humanitarian activities, which greatly influence kidney disease diagnosis and treatment globally.

**Through Sponsorship & Support**

As one of the leading organizations in providing access to nephrology education and training around the world, ISN welcomes partnerships with non-commercial and commercial entities to deliver its important healthcare mission. ISN’s many programs and activities offer countless possibilities for interested partners to collaborate with the Society. Specific opportunities are available via ISN’s publications, meetings, capacity-building programs as well as many others.
