**Candidate's Statement**

My name is Afiatin. I am honoured and excited to be a candidate of Oceania and South East Asia Regional Board Deputy Chair and ISN Councillor. OSEA Regional countries are unique due to heterogeneity of population, GDP, kidney health system and culture as well. This heterogeneity has some advantages in sharing experience and knowledge then make a good collaboration among us. I am excited to offer some of my experience in the registry, advocacy, capacity building and bridging collaboration with stakeholders although most of my activities are at a national level. I believe that data (disease registry) is a powerful source to change the policy of kidney health service and collaborative effort in integrated kidney care strategy, including prevention. I hope I can contribute to the OSEA board in making a collaboration according to regional priorities and country as well and suggesting the best way how ISN support for this region.
