Monographs, books and papers: 660 publications including papers in total, monographs, book chapters and excerpts. Over 50 lectures as inviter lecturer at international conferences.

Candidate's Statement

ISN regional Board leader: what I wish to accomplish

After 60 years of existence, ISN has shown success in connecting nephrologists and associate professionals with the goal of advancing the detection and treatment of chronic kidney patients. The mission and vision of ISN would not be possible without the close cooperation of its members who follow the common goals presented through numerous activities and written documents.

The input from individual regions is an important step towards a common goal, having in mind the climatic, ecological and racial specifics, and especially the different support from state authorities. That's how we learn from each other and that's how we help each other.

Joint activities should focus on the analysis:

- local health policy and possible restrictions in the implementation of evidence-based medicine
- possible shortages of drugs and medical devices
- local medical practice resulting from the attitude of national associations
- Joint CME by selecting the most current topics
- possibility of organizing a regional Scientific Advisory Board and Task Force for Emergency situations

All activities should be in line with the previous work of the Board, following the previously set goals.
