---

### **Candidate's Statement**

#### **Our vision for the Nephrology field in Africa**

Although many African countries had started the dialysis as well the Nephrology service very earlier , however the service to our patients is still not completed due to lake of human resources and budgets for continuous improvements , in the specific current shortages of dialysis equipment's , vascular access as well a fixed program for maintaining the dialysis therapies for most of sub-Saharan countries , we will have the opportunity to share , support our experiences, in Egypt for more than 50 years, on doing the outmost services to our patients The vision is to transfer our experiences in nephrology to the junior staff so the overall management will be reflected to the patient outcomes.

Continuous educational missions are the cornerstone for the goal of care.

Supporting developing countries to initiate and maintained an efficient way for overall patients care.
