

Xueqing Yu

Short Bio/CV

Dr Xueqing YU, Professor of Medicine, serves as the president of Guangdong Provincial People's Hospital/Guangdong Academy of Medical Sciences. He received both MD (1984) and PhD (1996) in Sun Yat-sen University, post-doctoral training at Monash Medical Center in Australia (1996-1997), and visiting professorship at Baylor College of Medicine, USA (2002). Dr Yu has played a leading role nationally and internationally in education, patient care, and research. He has a mentorship for over 40 postgraduate students and post-doctoral fellows and leads the national kidney center in China, consisting of over 106 kidney patient beds and 32 nephrologists/researchers. With 443 publications, his research focuses on prevention and molecular mechanisms of glomerulonephritis and PD-related complications. He has received 52 research grants, numerous prizes and recognitions, including the second prize in National Advanced Science and Technology Award. Dr Yu is now serving as the President of ISPD, Executive member of Asian-Pacific Society of Nephrology and Chair of CME committee, Editor board member of *Kidney International* and *American Journal Kidney Diseases*, subject editor of *Nephrology*. He is very active to organize the World Kidney Day in China.

Candidate's Statement

I'm honored to be nominated as the candidate for the 2021-23 North and East Asia Regional Board Deputy Chair.

If I got elected, I will focus on improving cooperation between ISN and local societies regarding CME courses, quality scientific research, and new models to implement the ISN's mission, which is "Advancing kidney health worldwide. Together."

The North and East Asia Region possesses several countries with a large patient population sharing common features. I believe that targeted webinars and research will be essential to address the problems that we all have. Cooperation can also serve as a platform for all countries in this region to exchange their ideas, accumulate experience, and share it with other regions.

Through cooperation, I think that the Northern East Asia Region will be more connected, thus strengthening the force to promote kidney health.
