

Waste Management #GreenNephrology

Estimate waste production

01

Facility walk through
Observe types and amount of waste, assess spaces, assess waste reduction efforts

Records examination
Supplies, inventory, maintenance, waste hauling and disposal, contracts

02

Tools

Sort waste
Identify each waste component and calculate its quantity

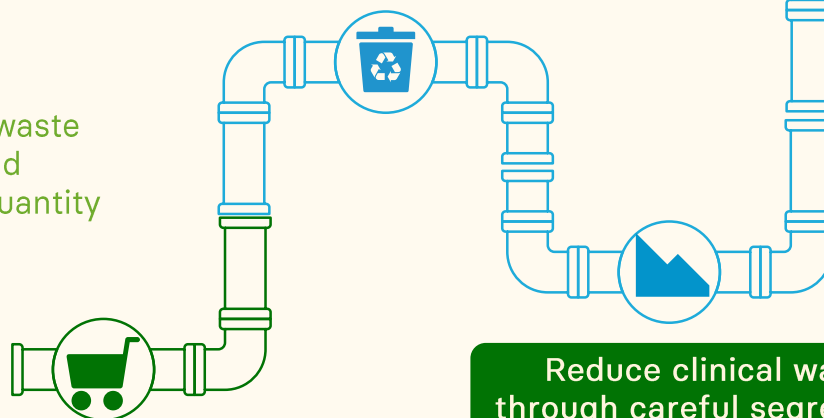

Environmental Protection Agency (EPA)
How to conduct record examination, facility work through, and waste sorting

03

Waste reduction strategies in dialysis care

Partner with suppliers for Recycling or take-back programs

Use electronic records

Bulk purchase & centralized distribution

Reduce clinical waste through careful segregation

Reduce biohazard waste

Invest in waste sterilizing device
